

## ANCHOR HANGERS

Wherever split anchor rings are used around a hanger, this hanger needs to be braced and is often referred to as an anchor hanger. It has the same construction as an intermediate hanger, except that the bottom horizontal crossmember is 1.5" (51 mm) longer on each side.

From this extended crossmember, bracing members are attached. The bracing can be an adjustable brace using threaded rods or a fixed brace using angle iron.

In some instances, hangers are not supported from the bridge, but instead "standing" on top of I-beams. For such instances, the support rods are shorter and instead extended downwards for attachment to an I-beam.

The form below shows an example of a 2 High x 3 Wide - Flat Bar / Round Tube, Champion Anchor Hanger.

This and other easy to use, Anchor Hanger PDF quotation forms, can be downloaded from our web site. [www.championfiberglass.com/bridge\\_hangers.html](http://www.championfiberglass.com/bridge_hangers.html)
