A Glimpse of the Progress at our Factory Expansion

On October 6th, we poured the 10,000 sq. ft. of concrete, now solidly part of the new foundation for the expansion of our conduit production facility.

The additional production line will allow our current production capacity of conduit to more than double within 2011. This step up in our manufacturing capacity is a necessary move for us to continue our move forward as a market leader in our industry.

Champion Fiberglass continues to manufacture the highest quality fiberglass products used within the electrical industry.
