
Handling and Storage

Transportation

Fiberglass bridge drain lengths are shipped in self-supporting crates designed to be unloaded by forklift. Crates should not be dropped from the truck trailer flatbeds.

Storage

- **Fiberglass bridge drain** crates should be stored on a flat level surface. The wooden frames should line up so the load will be transferred to the wood frames rather than the bridge drain. The height of stacked bridge drain should be limited to 12 ft.
- **Bridge drain fittings and accessories**, when stored outdoors, should be under cover to protect items in cartons from the outdoor elements until ready for installation.
